Subject: Qs & As for Rad Data release at Dimock

Dave/Rich/Marcos,

You three have been identified to help us put questions and answers to be included to help messaging when the data is released. Please work with Kelley (who has experience with data issues and messaging). Based upon your review of the data, please come up with a list of issues first and then some language on how best to explain the technical stuff into understandable language. For example - Half Life - numbers are high initially, there is a quick half-life and there isn't time for health effects (just an example). OK?

Dave - It is safe to say that we need the Project Level review of the Rad data finished by this Friday. OK?

Thanks for the help.

Rich

Rupert - I know you may be busy with other site work. You are mentioned specifically in the call this morning, so I have included you in this. I did mention that you were at another site in AZ this week and next. You call on being involved and balancing your workload. didn't want to exclude you. :)
